

Affordable Website Design

When faced with the prospect of creating a website for your business, what are the options?

You could spend thousands on a custom-designed website or perhaps opt for one of the cheap and cheerful template-based sites. In either case, is the finished website likely to get picked up by the major search engines? Business in Berkshire offer an affordable website design service – with the added bonus of high Google rankings and search engine success thrown into the mix.

With a Business in Berkshire membership you get your own website as part of the package. The design can be as simple or as complex as you want – our team of designers will help you achieve the results you want. With prices starting at just £180.00 plus VAT, it's an affordable website design option which not only gives your business an online presence but also pays it way by directing potential customers to your door.

How does it work? Because our website contains all the right features that search engines love to see – content which changes regularly, relevant links to and from other websites, cleanly-coded HTML pages – we consistently achieve high rankings on Google and other major search engines. Indeed, 80% of all the articles we have published in our newsletters have achieved a page one listing on Google.

Business in Berkshire offer affordable website design coupled with our excellent

track record for search engine success. Although your website will have its own identity, the pages will be part of the Business in Berkshire website overall – which means your website benefits from being part of a site which already has search engine appeal. It could take you years to achieve the same level of search engine success with a standalone website.
