

# Custom Website Designer

Are you looking for a custom website designer who doesn't charge a fortune but will build you a website with the look and feel you want? And just for good measure, can this custom website designer also guarantee the finished site a good position in Google's search rankings?

Think 'custom designed website' and chances are you automatically envisage something expensive. After all, if your website designer is creating a bespoke design from scratch, it's bound to take more time than an 'off the peg' template design. Now with Business in Berkshire, you won't need to face that cost dilemma. Because our content management system is flexible enough to allow us to create a custom website for your business at a price you'd normally associate with a basic template-style offering.

Most custom website designers can build you a fantastic looking website, but will it get noticed by the all-important search engines? Sadly there are thousands of custom built websites out there which look pretty but can't actually be found in an online search. Again, this is an issue you won't face with a Business in Berkshire custom built website.

Whichever level of membership you opt for, you'll receive a website which will get you and your business noticed – not just by our thousands of regular readers but also by Google and the other major search engines.

We've been involved in the internet since 1999. Since then we've helped hundreds of local businesses develop their online presence, either by offering affordable website design, custom designed websites, email marketing tools, or a complete online public relations kit in the form of one of our Business in Berkshire Bronze or Silver accounts.
