

# Diamond drilling services

Diamond Drilling offers a cost-effective solution to any construction project needing fast, accurate cutting and drilling solutions, particularly if noise and dust reduction is of concern.

**D**iamond drilling can be used to create holes from 5mm to 1 metre in diameter through all types of mass and reinforced concrete, brickwork/block work.

The work is carried out by our experienced professionals, using hand-held tools, electric or large hydraulic rigs depending on the requirements of the projects.

Diamond drilling is just one method in our armoury that also includes diamond sawing, hydraulic crushing/bursting and robotic demolition

## Stitch drilling and dowel hole drilling

Diamond drilling is suitable for various applications, including stitch drilling and dowel hole drilling. We would be happy to discuss the suitability of diamond drilling to your particular construction project and will use our experience and know-how to recommend the best course of action.

Diamond drilling can be used in stitch drilling, drilling a series of overlapping holes to form openings of any shape through any thickness of concrete, brick or block work.

Dowel hole drilling uses automatic machines to percussion drill holes for dowels in the edge of slabs without the need for manual drilling.

No matter what you choose it for, diamond drilling offers a fast, neat and accurate solution to drilling, cutting and doweling, making your construction job safer, quieter and more cost-effective.

Technical Concrete Cutting operate in the southern half of the UK
