

FIRE ALARM

INSTALLATION AND MAINTENANCE

R&G Electrics UK carry out fire and smoke alarm installation, maintenance and testing to help companies of all sizes meet their fire safety obligations.

In 2005, the new Fire Order replaced the old Fire Certificates.

This regulatory reform was significant for the owners and Directors of businesses, as it placed the responsibility for fire safety firmly at their door. The onus is now on business owners to carry out efficient fire risk inspections, produce assessments and take the results forward.

A common result of a fire risk assessment will be the need to install and maintain effective fire detection equipment. R&G Electrics UK, the NCIEIC-registered fire alarm systems experts, can help.

Based in London, we carry out fire detection equipment installation and maintenance in London and the

surrounding areas. Our experienced team will meet with you to discuss the results of your fire safety assessment, before supplying and physically installing detection equipment and fire alarms. Just as importantly, we can maintain the equipment, testing it periodically so you know your staff and visitors are safe. We can also fit and maintain replacement fire and smoke alarms if your existing units need updating to comply with regulations.

R&G Electrics UK are a small, specialist team of electrical contractors with decades of experience in electrical maintenance. We are renowned both for our excellent customer service and for the quality of our electrical work.

To find out how we can help you, contact us on 0800 652 5532.
