Vehicle Tracking System Two vehicles recovered using Cistrack

The Innovative Asset Tracking system Cistrack was fundamental in recovering two luxury hire cars owned by Prestige Car Rental in Manchester.

Prestige were able to quickly track the vehicles after one had been hired with false details and the second was used to secure a loan from a loan shark. The second vehicle was hidden from the road, with the street level mapping from Cistrack the owners were able to establish the exact location and recover the car.

Cistrack is a unique tracking device. At any time the Cistrack device can be tracked to street level using a mobile phone or online. All other systems require the user to obtain a crime reference number before the exact location of the stolen asset is found. This was crucial in the recovery of the hired vehicles as both thefts would have been considered civil matters, therefore the police would not of got involved.

“Without the Cistrack our business would be much harder to manage. It is so easy to use, I am able to look online anytime and see where my vehicles are, and without this we would not have got our cars back.”

Sal Chaudry, Prestige Car Rental

An easily transferable Cistrack device is the Mag Pod. A stand-alone small plastic box containing the innovative tracking device, secured onto the vehicle using four very powerful magnets.

This device is used extensively around the UK by Private Investigators for surveillance. Other primary uses are to track under performing delivery drivers or salesman and to give peace of mind to car sales companies during test drives.

Car Jacking in London is up by 30%. Thieves are getting increasingly desperate as the security systems in modern cars improve. Using the Cistrack device gives ultimate peace of mind.
